Vol. V, Issue Nos. 13–18, 1961

Journal of Applied Polymer Science

ISSUE NO. 13, JANUARY–FEBRUARY

J. D. WILCOX, R. K. JUNE, H. A. BROWN, JR., and R. C. KELLEY, JR.: The Retardation of Drop Breakup in High-Velocity Airstreams by Polymeric Modifiers 1

E. M. FETTES and H. MARK: Cleavage of Disulfide Polymers. I. By Inorganic Sulfides 7

G. FARAONE, G. PARASACCO, and C. COGROSSI: Grafting on Cellulose Acetate 16

PETER M. HAY, JOHN C. LIGHT, LEON MARKER, ROBERT W. MURRAY, ANTHONY T. SANTONICOLA, ORVILLE J. SWEETING, and JAMES G. WEPSIC: Mechanism of Emulsion Polymerization of Vinylidene Chloride. I 23

JOHN C. LIGHT, LEON MARKER, ANTHONY T. SANTONICOLA, and ORVILLE J. SWEETING: Mechanism of Emulsion Polymerization of Vinylidene Chloride. II. Effect of Coalescence of Polymer Particles on Kinetics 31

CHARLES P. EVANS, PETER M. HAY, LEON MARKER, ROBERT W. MURRAY, and ORVILLE J. SWEETING: Mechanism of Emulsion Polymerization of Vinylidene Chloride. III. Effects of Stirring Rate on Kinetics 39

ZIGMOND W. WILCHINSKY: Clarity Measurement of Polymer Films 48

P. J. CORISH: Infrared Spectroscopic Studies of Ultrathin Microtomed Sections of Polymers. Part II. Characterization of Both Fillers and Rubbers in Cured Rubbers Loaded with Inorganic Fillers 53

J. A. SIMMS: Epoxide-Substituted Vinyl and Acrylate Copolymers 58

A. R. SHULTZ and S. M. LEAHY: Random Chain Scission of Polyethylene Terephthalate by Light Determination of Active Wavelength 64

HERBERT A. POHL and COSTAS G. GOGOS: The Behavior of Polyisobutylene During Melt Shear 67

E. F. CLUFF, E. K. GLADDING, and J. B. ROGAN: Relation of Structure to Properties in Polyurethanes: Effect of Branching 80

C. H. KLUTE and W. VIEHMANN: Heat of Polymerization of Phenyl Glycidyl Ether and of an Epoxy Resin 86

RICHARD S. STEIN: A Procedure for the Accurate Measurement of Infrared Dichroism of Oriented Film 96

G. R. SPRENGLING and E. J. TRAYNOR: Phenolic–Nitrile Rubber Copolymers 100

T. TSUDA: A Tracer Study of the Persulfate–Bisulfite-Catalyzed Polymerization of Acrylonitrile 104

YOSHIO IWAKURA, YASUO TANEDA, and SHINYA UCHIDA: Preparation and Properties of Polyester–Urethane Block Copolymers 108

C. BOOTH, L. R. GLEASON, and J. T. BAILEY: Incremental Modification of Styrene–Butadiene Rubber with *tert*-Dodecyl Mercaptan 116

NOTES

T. F. SCHATZKI: Glass Transitions in Polymers S1

HOWARD C. HAAS and NORMAN W. SCHULER: Poly-3-(2,5-Diacetoxyphenyl)Propylene Oxide S2

Polymer News ..... S4 and Inside back cover

Issue No. 14, March–April

Hans Dannenberg: Measurement of Adhesion by a Blister Method 125
Gerald G. Greth and Joseph E. Wilson: Use of the HLB System in Selecting Emulsifiers for Emulsion Polymerization 135
G. Smets, J. Roovers, and H. van Humbeek: Influence of the Initiator on the Grafting of Polyvinyl Polymers 149
H. H. Takimoto, C. T. Forbes, and R. K. Laudenslager: A Viscosity–Molecular Weight Relationship for Polydimethylsiloxanes 153
E. C. Leonard, Jr., W. E. Loeb, J. H. Mason, and W. L. Wheelwright: A New Synthetic Elastomer Based on a Chlorophosphonated Polyolefin 157
Carl M. Conrad, D. J. Stanonis, J. J. Creely, and Pieter Harbrink: Changes in Fine Structure and Mechanical Properties Induced by Cyanoethylation of Cotton Yarns. II. Reacted Without Longitudinal Shrinkage 163
P. J. Fydelor and R. W. Pearson: Unsaturation in Irradiated Marlex 50 Polyethylene: Dose Rate and Post-Irradiation Effects 171
Hans Schott and W. S. Kaghan: Viscous Flow of Molten Polyethylene Resins 175
Tod W. Campbell: Poly(4-methyl-1-pentene) and Some Soluble Crystalline Copolymers 184
Donald E. Kline: Radiation Effects in Polystyrene 191
A. D. McIntyre: Temperature Dependence of Dynamic Mechanical Properties of Mixed Polymer Systems 195
Giovanni B. Gechele and Giovanni Convalle: Properties of Homopolymers of 2-Methyl-5-vinylpyridine 203
John E. Murphy and John E. Forrette: Determination of Residual Styrene (Monomer) and Acetophenone in Polymer Latices 208
K. K. Georgieff and G. S. Shaw: The Relative Inhibitory Effect of Various Compounds on the Rate of Polymerization of Vinyl Acetate 212
Thor L. Smith and Alan B. Magnusson: Diisocyanate-Linked Polymers. III. Relationships Between the Composition and Ultimate Tensile Properties of Some Polyurethane Elastomers 218
Yuji Minoura and Mamoru Asao: Studies on the γ-Irradiation of Natural Rubber Latex 233
Eric Baer and Thomas F. McLaughlin: The Determination of Surface Properties of Polymers from Liquid Drop Stability on an Inclined Plane 240

SUBJECT INDEX, VOLUME V

Acetophenone, determination in polymer latices, 208
Acetylacetonates, metal, catalytic parameters, 424
Acetylation, heterogeneous, effects on isotropic cellulose film, 545
Acrylonitrile, potassium alkoxide polymerization, 251
tracer study of persulfate–bisulfite-catalyzed polymerization, 104
Adhesion, measurement by blister method, 125
Airstreams, high-velocity, retardation of drop breakup, 1
Antioxidants, stabilization of polyethylene, S15
Branching, effect in polyurethanes, 80
identification in polyolefins, 247
Butadiene, styrene, emulsion polymerization, 308
Butyl rubber, vulcanizate, gum properties, 322
By-products, effects on ripening of viscose, 375
Catalysis, parameters, isocyanate polymerization reactions, 424
Cellulose, alkali, nonaqueous fluid xanthation, 624
derivatives, graft by transfer reaction, 558
diazonium derivatives, initiators of graft, 553
initiation of graft polymerization, 539
isotropic film, effects of acetylation and methylation, 545
resilience of modified cottons, 704
substitution during emulsion xanthation, 364
Cellulose, regenerated, effect of softeners on elastic modulus, 655
inter- and intramolecular order, 676
viscoelasticity of sheet, 647
Cellulose acetate, grafting, 16
Cellulosic polymers, fluorescence, 534
Chain scission, random, polyethylene terephthalate, 64
Cleavage, of disulfide polymers by inorganic sulfides, 7
Copolymers, glass temperature of acrylonitrile–vinyl acetate, 303
isobutylene, 452
phenolic–nitrile, 100
polyester–urethane, preparation and properties, 108
soluble crystalline, and poly(4-methyl-1-pentene), 184
vinyl and acrylate, epoxide-substituted, 58
Cottons, chemically modified, resilience, 686
crosslinking with diglycidyl ether, 714
crosslinking with *N*-methylol acrylamide, 734
yarns, changes in fine structure, 163
Crosslinking, cotton, with *N*-methylol acrylamide, 734
cotton cellulose, with diglycidyl ether, 714
γ-irradiation, natural rubber latex, 401
radiation, vinyl chloride–vinyl stearate, 388
role in wet crease recovery, cellulosic fabrics, 721
Crystallinity, irradiated polyethylene, 408
siloxane polymers, 436
Cure, Viton A fluorocarbon elastomer, 460
Curing systems, epoxy resins, chemistry, 370
Cyanoethylation, inducing changes in fine structure, 163
Diethylacetamide cellulose xanthate, solution properties, 641
Diglycidyl ether, crosslinking of cotton cellulose, 714
Dimethyl sulfoxide, diethylacetamide cellulose xanthate solution properties, 641
Disulfide polymers, cleavage by inorganic sulfides, 7
tert-Dodecyl mercaptan, modifying styrene–butadiene rubber, 116
Dynamic tests, instrumentation and machines (*erratum*), S6
Dyeability, polyacrylonitrile fibers, 606
Elastic modulus, effect of softeners, regenerated cellulose sheet, 655
Elasticity, molten polymers, stress relaxation data, 574
Elastomer, new synthetic, 157
polyurethane, composition and tensile properties, 218
post cure, Viton A fluorocarbon, 460
SBR, ionizing radiation damage, 501
viscoelastic factors in strength, 442
Emulsion polymerization, butadiene and styrene, 308
coalescence of polymer particles, vinylidene chloride, 31
HLB system, 135
stirring rate, vinylidene chloride, 39
vinylidene chloride, 23
Epoxy resins, chemistry of curing systems, 370
heat of polymerization, 86
ESR studies, irradiated polyvinyl chloride, 478
Fabrics, cellulosic, role of crosslinking in wet crease recovery, 721
Films, clarity measurement, 48
formation from viscose, mechanism, 627
oriented, procedure for measuring infrared dichroism, 96
viscose, dry casting, 635
Fine structure, changes induced by cyanoethylation, cotton yarns, 163
Formaldehyde, reaction with cellulose under acid conditions, 704
Fractionation, comparison of thermal gradient and elution methods, 354
Graft, on cellulose, initiation, 539
on cellulose acetate, 16
on cellulose derivatives by transfer reaction, 558
initiation by diazonium derivatives of cellulose, 553
polyvinyl polymers, 149
radiation, dyeability of polyacrylonitrile fibers, 606
vinyl monomers onto crosslinked polymers, 563
Heterogeneous systems, torsional modulus studies, 580
HLB system, for selecting emulsifiers, 135
Infrared, dichroism, measurement procedure for oriented film, 96
identification of short-chain branches, 247
spectroscopy, ultrathin microtomed sections, 53
Initiator, graft, diazonium derivatives of cellulose, 553
influence on grafting polyvinyl polymers, 149
Instrumentation, dynamic tests (*erratum*), S6
Intrinsic viscosity, determination from one-point measurements, 282
versus melting point, aliphatic polyureas, 384
Isocyanate polymerization reactions, catalytic parameters, 424
Isopropylbenzyl chloride,–vinylbenzyl chloride copolymers, 452
Light scattering, polyisoprene solutions, 510
Machines, dynamic tests, (*erratum*), S6
Mechanical properties, dynamic, tem-

perature dependence in mixed systems, 195
Melt index, polyethylene, radiation effects, 601
Melt shear, behavior of polyisobutylene, 67
Melting point, versus intrinsic viscosity, aliphatic polyureas, 384
Methyl methacrylate, graft onto fibers spun from polymer blends, 563
2-Methyl-5-vinylpyridine, properties of homopolymers, 203
Methylation, effects on isotropic cellulose film, 545
Methylene dibromide, reaction with alkali cellulose and with sodium cellulosates, 686
N-Methylol acrylamide, crosslinking cotton, 734
Microscope hot stage, improved, S13
Modifiers, detection in natural materials, 493
polymeric, retarding drop breakup in airstreams, 1
Molar cohesion, and glass temperature and polymer structure, 318
Molecular weight, distribution, method for estimating (*erratum*), S20
and viscosity, relationship for polydimethylsiloxanes, 153
Mullins effect, rubber–filler interaction, 271
Networks, cellulosic, with known amounts of crosslinks, swelling, 752
Odor control, carbon-loaded rayon monofilaments, 668
Phenolic resin, polyvinyl butyral system, viscoelasticity, 468
Phenyl glycidyl ether, heat of polymerization, 86
Polyacrylate, compatibility studies of systems, 337
Polyacrylonitrile, fibers, dyeability, 606
glass temperature, 303
Poly-3-(2,5-diacetoxyphenyl)propylene oxide, S2
Polydimethylsiloxanes, viscosity-molecular weight relationship, 153
Polyelectrolyte, new hydrocolloid, 519
Polyethylene, cold working, S11
effect of radiation on melt index, 601
irradiated, crystallinity and transparency, 408
linear, and copolymers, weatherability, 612
radiation and post-irradiation effects, 171
stabilization by antioxidants, S15
viscous flow of molten resins, 175
Poly[ethylene *co* 2,2-bis(4-phenylene)-propane carbonate], elimination of ethylene carbonate, S15
random chain scission, 64
Polyethylene terephthalate, amorphous, straining, 482
Polyhydrocarbons, relationship between structure and properties (*erratum*), S6
Polyisobutylene, behavior during melt shear, 67
Polyisoprene, light scattering measurements of solutions, 510
Polymerization rate, vinyl acetate, 212
Polymethacrylate, compatibility studies of systems, 337
Poly(4-methyl-1-pentene), and soluble crystalline copolymers, 184
Polyolefin, chlorophosphonated, for new elastomer, 157
short-chain branches in, 247
Polysaccharide B-1459, 519
Polystyrene, radiation effects, 191
Polytetrafluoroethylene, pressure and room-temperature transition, 331
Polyureas, aliphatic, melting points versus intrinsic viscosities, 384
Polyurethane elastomers, composition and tensile properties, 218
Polyurethanes, relation of structure to properties, 80
Polyvinyl alcohol, and products, methyl methacrylate grafted onto blends, 563
Polyvinyl butyral, phenolic resin system, viscoelasticity, 468
Polyvinyl chloride, irradiated, ESR studies, 478
Polyvinyl polymers, grafting, influence of initiator, 149
Potassium alkoxides, in acrylonitrile polymerization, 251
Radiation, crosslinking of vinyl chloride–vinyl stearate, 388
crystallinity and transparency of polyethylene, 408
graft, dyeability of polyacrylonitrile fibers, 606
ionizing, damage in SBR elastomers, 501
Marlex 50 polyethylene, 171
natural rubber latex, 233, 401
on polyethylene melt index, effect, 601
in polystyrene, effects, 191
Rayon, monofilaments, activated carbon-loaded, 663
odor control by carbon-loaded monofilaments, 668
viscose, resiliency and modulus as function of swelling and temperature, 589
Resilience, chemically modified cottons, 686, 704
Resins, alkyd, gelation point, S16
polyethylene, viscous flow, 175
Rheology, polymers, S5
Rubbers, characterization of fillers and rubbers, 53
halogenated butyl, gum properties, 322
interaction with filler, 271
light-scattering measurements on polyisoprene solutions, 510
natural latex, gamma radiation, 233, 401
room temperature sulfur and nonsulfur vulcanization, 349
strain dependence of viscoelasticity, 428
styrene–butadiene, incremental modification, 116
sulfur linkages, 293, 299
Silica, filling, peroxide and radiation-cured compounds, 397
Siloxane polymers, crystallinity, 436
Sodium carboxymethylcellulose, control of aggregation, 261
Solution properties, diethylacetamide cellulose xanthate, 641
water-soluble polymers, 261
Straining, amorphous polyethylene terephthalate, 482
Stress relaxation, data, elasticity of molten polymers, 574
oxidative, rate, S18
Stress-strain, film, recording and computation, 527
Structure, and molar cohesion and glass temperature, 318
Styrene, and butadiene, emulsion polymerization, 308
catalyzed polymerization, for detecting modifiers, 493
determination in polymer latices, 208
incremental modification, 116
Substitution, during cellulose emulsion xanthation, 364
Sulfur, linkages in rubber–sulfur systems, 293, 299
Surface properties, determination from liquid drop stability on inclined plane, 240
Swelling, cellulosic networks with known amounts of crosslinks, 752
Temperature, gelation of alkyd resins, S16
glass, and molar cohesion and polymer structure, 318
glass, polyacrylonitrile and acrylonitrile–vinyl acetate, 303
Temperature, room transition, polytetrafluoroethylene, 331
Thermogravimetric data, kinetic analysis, 285
Torsional modulus, studies of heterogeneous systems, 580
Trace components, effects on ripening of viscose, 375

Transfer reaction, in graft on cellulose derivatives, 558
Transparency, irradiated polyethylene, 408
Ultracentrifuge, polymer adhesion measurements, 87
Vinyl acetate, inhibition of polymerization rate, 212
Vinyl chloride, vinyl stearate copolymer, radiation crosslinking, 388
Vinyl stearate, vinyl chloride copolymer, radiation crosslinking, 388
Vinylbenzyl chloride, isopropylbenzyl chloride copolymers, 452
Vinylidene chloride, coalescence of polymer particles in emulsion polymerization, 31
  emulsion polymerization, 23
  stirring rate in emulsion polymerization, 39
Viscoelasticity, factors in elastomer strength, 422
  phenolic resin–polyvinyl butyral system, 468
  regenerated cellulose sheet, 647
  rubber, strain dependence, 428
Viscose, dry casting of film, 635
  mechanism of film formation, 627
  rayon, resiliency and modulus as function of swelling and temperature, 589
  regeneration, effects of sodium salts on additive, 491
  ripening, effects of compounds, 375
Viscosity, determination from one-point measurements, 282
  intrinsic: see Intrinsic viscosity
  molecular weight, relationship for polydimethylsiloxanes, 153
Viscous flow, molten polyethylene resins, 175
Vulcanizate, halogenated butyl rubber, 322
  structure in natural rubber–sulfur systems, 293, 299
Vulcanization, sulfur and nonsulfur, natural rubber, 349
Weatherability, linear polyethylene and copolymers, 612
Wet crease recovery, cellulosic fabrics, role of crosslinking, 721
Xanthation, cellulose, uniformity of substitution, 364
  nonaqueous fluid, alkali cellulose, 624
